1. The following is an examiner's statement of reasons for allowance: Applicant's arguments have been fully considered and deemed to be persuasive. In combination with other limitations of the claims, the cited prior arts fail to teach a first set of IOBs configured to operate in response to a first clock signal of the plurality of clock signals, a second set of IOBs configured to operate in response to a second clock signal of the plurality of clock signals, and a third set of IOBS configured to operate in response to a third clock signal of the plurality of clock signals, as recited in claim 1; the cited prior arts also fail to teach a step of operating a second set of input/output blocks in response to a second clock signal of the plurality of clock signals, wherein the second clock signal lags the input clock signal by a predetermined second phase angle, as recited in method claim 8; the cited prior arts also fail to teach a step of introducing a plurality of discrete delays to the input clock signal, thereby generating a corresponding plurality of delayed clock signals, wherein the sum of the delays is less than the period of the input clock signal, as recited in claim 16; the cited prior arts also fail to teach the delay control circuitry is configured to program a delay in each of the plurality of series-connected programmable delay lines in response to the period of the input clock signal, as recited in claim 21; and lastly, the cited prior arts also fail to teach means for introducing a plurality of delays to the input clock signal, thereby generating a corresponding plurality of delayed clock signals, wherein the sum of the delays is less than the period of the input clock signal, as recited in claim 26.
2. Claims 1-8, 11, 12 and 14-26 are now in condition for allowance.
